Brief introduction

Hi! I'm a software engineer.
I've been an engineer professionally for 3 years, worked as backend engineer at 2 startups, along with a few side projects.
I have considerable experience in web development. I can easily adapt to changes and I am willing to learn. Besides, I have always wanted to work in the startup company and spent so much time to read about this industry. With my knowledge and enthusiasm, I think I can do well in this position.

Education

University Of Information Technology   Sept 2014 - May 2018
Bachelor of Computer Science
• **Courses:** OOP in C++, Compilers, Algorithms, Operating Systems, Data Structures

Skills

Languages: Ruby, Java, Javascript
Technologies: React.js, Ruby on Rails, MongoDB, Postgresql, AWS, Git,
DockerExposure: AWS, Linux, MacOs, Kafka, Elasticsearch

Professional Experience

Deliveree On-Demand Logistics   July 2019 – Present
Software Engineering – Production Team – Product Full Truck Load   July 2019 – Dec 2020
• Implemented data and logic from APIs to UI components React.js in webapp
• Designed and implemented data models for business logic that integrated with model, APIs and thoroughly tested using unit or integration tests
• Reduce the bug Jira by 25% on 2 months, apply scrum on project team by educating and implementing
• Wrote scripts to correct data on productions about relation bookings
Backend Engineering – Cargo Team – Product Partial Truck Load   Dec 2020 - Present
• A product solution for list smaller deliveries and get competitive bids and best prices.
• Using an event driven architecture Kafka for the interactions between key modules through topic messages (bundling engine, FTL and PTL platform)
• Implemented Elasticsearch monitoring and search my booking of customer, faster about 15% than before.
• Wrote helper functions and using them as much as possible to avoid code repetitions.

Revollet Browser-based crypto wallet
Backend Engineering   April 2018 – July 2019
• A web applications solution for crypto exchange, money remittance, prepaid cards and crypto trading platforms.
• Reduced the bouncing rate by 10%, using B2B API security to crypto exchange.
• Built a stock prediction REST API to predict the stock performance of any given company. The feature to help stock traders/investors to understand trend and decide on investments.
• Trained the model using a node tree base on mongoDB data, liner regression.

Freelance Engineer
Software Engineering

After working as a full-time engineer for a while, I wanted to give freelancing a try.

• Project allows customer to discover and book online with salons, spas and nails. Booking through the Webapp services.

• Facilitated module sessions with the implementation team to define the solution for website services nail spa

Honors and Awards

• We code challenge (encourage prize – Dec 2015)
• UIT hackathon   (encourage prize team – Nov 2016)
